

시즌 2 랜딩 치트시트

폴라 스톰 · 얼어붙은 맵 · 히토 전쟁

현역 R5가 작성. 얼라이언스 내부에서 자유롭게 배포하세요.

모든 얼라이언스가 놓치는 4개 좌표

동맹 화로 tile

The single tile your R4/R5 plants the 동맹 화로 on. Must be a Level-1 territory. Must be inside your intended corner but far enough in that the hive can wrap it. Once placed, up to 20 members must reinforce it to activate — no build-time delay after activation.

집결지

Should sit near the 동맹 화로 but OUTSIDE the 25×25 워로드 미사일 blast area. The 집결지 is your evicted-defenders' return tile when a 워로드 미사일 lands (every base inside the blast area is randomly teleported across the map on impact).

렐리 리더s' anchor tiles

R4/R5 rally leaders — Marshal, 전쟁군주 — pin to the inner ring adjacent to the 동맹 화로. Their rally leader temperature bonus applies to the entire rally, so lower-power members can join operations deep in the frost.

Weakest-member fallback ring

Weakest members (lowest HQ, lowest heat stack) park CLOSEST to the 동맹 화로. Stronger anchors absorb hits on the outer ring. This inverts the intuition — most alliances put their strongest on the furnace because that's where the fighting is. Wrong. Freeze cascades kill weak members first; put them in the warmest ground.

● 화로 ● 렐리 리더 ● Weakest ● Assembly

본부 레벨별 랜딩 티어 우선순위

Weaker players get the warmest tiles. Strongest anchor the outer ring. 동맹 화로 at L1 puts out only +3 ° C, so tile choice matters more than gear at the start of Week 1.

HQ Level	Landing 티어	Distance from 화로	Reason
HQ 30+	OUTER RING	8-12 tiles	Absorbs hits · rally anchor · high heat stack
HQ 27-29	MID RING	5-7 tiles	Backup reinforcement · shares heat radius
HQ 24-26	INNER RING	3-4 tiles	Needs city + furnace coverage to survive W3 blizzard
HQ ≤ 23	FURNACE ADJACENT	1-2 tiles	Any freeze cascade kills them first · park here

Notes:

L6 city grants +60 ° C in range — captured cities snap the local tile to -10 ° C, effectively a warm island.

Do NOT park directly on the 동맹 화로 tile — the 25×25 워로드 미사일 blast will teleport you away.

The 5-tile safe-distance rule (outside the 25×25 blast) still applies to everyone, weak or strong.

랠리 리더 배치 — 3초 창

Rallies use the leader's temperature bonus — every member in a rally inherits the leader's heat stack. This is why a low-heat R2 can join a rally into the -80°C 수도 zone if the R5 leading has $+131^{\circ}\text{C}$ stacked. Place your rally leaders where they can start rallies inside 3 seconds of a call in alliance chat.

Key facts:

랠리 리더s (Marshal, 전쟁군주) MUST be within 1–2 tiles of the 동맹 화로.

The 워로드 미사일 has a 3-minute (180s) prep window during which the enemy 전쟁군주's base coordinates are broadcast in world chat — cancel it by rallying their base and forcing a breach or relocation.

A cancelled 워로드 미사일 applies a 72-hour cooldown on the missile skill (not the 전쟁군주 role — rotate title to a shadow 전쟁군주 R4 to keep another missile ready).

Combat opens at 12:30 server time on Wednesday and Saturday of every war week — Prep runs 12:00–12:30, Combat runs 12:30–13:10 (40 min max).

시즌 2 has NO 얼라이언스 세이프 타임 (that's 시즌 5+). Every alliance on your warzone fights on the same fixed 12:30 server-time schedule.

Below: standard rally-leader anchor pattern. 화로 at center; two rally leaders at N/S with 1-tile buffer; 집결지 outside the 25×25 blast ring so evicted bases have somewhere to rejoin.

화로 · 랠리 리더s adjacent · Assembly outside 25×25 blast

첫 72시간: 건설 순서 & 자원 비율

석탄 is fuel and factory-upgrade currency. 티타늄 is furnace-upgrade currency only. 희토 is season rank + 동맹 화로 auto-upgrade trigger. Meat and iron are base-game resources — 시즌 2 does not consume them at unusual rates, so keep normal RSS gathering going but prioritize coal above all else.

Priority order:

1. HOUR 0-2: R4/R5 deploys 동맹 화로 on a Level-1 territory. Every online member reinforces immediately (~20 needed to activate).
2. HOUR 0-2: Every member builds their own 고열 화로 (personal, max L30) and turns on the 'auto-activate in blizzard' toggle.
3. HOUR 2-12: Capture your first Level-1 dig site (adjacency rule — first alliance capture MUST be an L1 dig site).
4. HOUR 2-24: Every member builds 티타늄 합금 공장 #1. Factory #2 unlocks at L15 on #1; same for #3 and #4.
5. HOUR 12-72: 레이더 missions cleared for coal payout (stack radars before season start; first-kill on a level-180 Wanderer post-transition = ~200,000 coal community-reported).
6. HOUR 24-72: R5 captures 2nd dig site (2 captures/day cap) and starts positioning for first L1 city (unlocks W1 day 3 + 12h).

Resource	Where it goes	Prioritize
석탄	화로 fuel + 티타늄 factory upgrades	★★★ HIGHEST — everything downstream needs it
티타늄	고열 화로 upgrades ONLY	★★ Only after factories are producing at L15+
희토	시즌 rank + 동맹 화로 auto-upgrade	★★★ Capture territory early; hold forever
Meat / 철	Base-game troop training + healing	★ Keep normal gathering; not the bottleneck
오일	Vehicle production (base-game)	★ Keep normal gathering; not the bottleneck

Notes:

동맹 화로 L20 burns 1,440 coal/min normal, 5,760 coal/min overdrive — plan 50 coal donations/member/day cap.

Do NOT kill your highest-level Wanderer / 둠 워커 BEFORE the map transition — the coal first-kill reward only pays out post-transition.

티타늄 합금 공장 upgrade coal cost: L1 = 720 · L15 = 137,000 · L30 = 359,300. Full 4-factory build to L15 is ~Week 1-2 priority.

이러면 망합니다... (the R5 warning checklist)

1. Your 동맹 화로 isn't activated by end of Day 1.

20 reinforcements gate it. If nobody garrisons, nobody has shared heat. Week 1 -30 ° C blizzard freezes half the hive.

2. Your first alliance capture isn't a Level-1 dig site.

The adjacency rule locks you out of expansion. Every subsequent capture must be adjacent to existing alliance territory — the L1 dig site is your anchor.

3. You parked bases directly on the 동맹 화로 tile.

워로드 미사일 lands, 25 × 25 blast area, every base inside gets randomly teleported across the map. You'll spend 30+ minutes teleporting back while defenders are down.

4. Your 전쟁군주 officer burned the missile skill before a war round.

72-hour cooldown. Rotate the 전쟁군주 title to a shadow R4 who hasn't fired theirs — otherwise you enter Wednesday war with no missile available.

5. You captured into a higher stockpile bracket you can't defend.

희토 전쟁 brackets (Ranks 1–10, 11–20, 21–30, 31–50) are set by stockpile. Over-capturing promotes you into a tougher bracket where you get plundered faster than you produce.

6. Your weakest HQs are on the outer ring.

Freeze cascades kill low-heat members first. Weak = furnace-adjacent. Strong = outer ring. Getting this backwards is the #1 wipe pattern.

7. Nobody enabled 'auto-activate in blizzard' on their 고열 화로.

눈보라s are announced hours in advance but if a member is asleep, the auto-toggle is what keeps them from freezing. Enable it Day 1, no exceptions.

8. You planned around '얼라이언스 세이프 타임' from a 시즌 5 guide.

시즌 2 has no Safe Time. Every alliance fights at 12:30 server time on Wednesday and Saturday. If your server-time = 04:30 local, that's the hour you fight. Plan the roster around it.

랜딩 플래너 도구 받기

This cheat sheet gets you 80% of the way. The Landing Planner tool does the last 20% — assigns every one of your 100 members a specific tile relative to your anchor, exports a labeled PNG for Discord, and generates a Freeze-Risk score per member before Day 1 even starts.
